

Deep Learning Course

Lecturers

- Head of DS at [Prog.AI](#)
- Lead Engineer at Dun & Bradstreet
- Phd Student at IASA KPI (NLP/Disinformation thesis)
- Lecturer at KSE and IASA KPI
- Kaggle Expert and winner of lots of Ukrainian Kaggle Competitions

- Senior Computer Vision Engineer in Better Medicine
- Co-Founder/Deep Learning Lead at Zvook
- Machine Learning advisor at Mantis Analytics
- Kaggle Competition Grandmaster. Top 30 World Competition Rating
- Phd Student at IASA KPI (Medical Imaging thesis)
- Lecturer at KSE, IASA KPI, and UCU

Course structure and Rules

- 4 Modules:
 - 3-5 Lectures per module.
 - One BIGGGG Practical task per module.
- Lab Assignments (4x15 points):
 - Google form to submit Practical task.
 - The deadline is HARD!!! If you do not fit the deadline, you will get 0.
 - Maximum score = 15.
 - You can try to defend your assignment several times **till the deadline**
 - One student (group of students) can submit only one Google form.
 - Up to 3 students in a group
 - If you experience any problems, contact lectors directly.
 - Defence of each assignment will be **completely offline - on practices**
- Course Project (20 points)
 - You can do it in a group (up to 5 students) or individually
 - Topics: Kaggle Competition, Paper Future Work Implementation, Research Project (NLP topics can be advised by Anton, CV/Audio by Volodymyr), other ideas. **BUT each topic should be approved by one of the Lecturers**
 - Maximum score = 20

Course structure and Rules

- Course Assignment: a thoughtful paper review (15 points):
 - Pick a paper on appropriate (Deep Learning-related, without intersection with ML-course papers) topic and **confirm with one of the Lecturers!**
 - Should be done alone, NOT in a group.
- Preliminaries test (5 points)
 - Type: Individual written assignment to evaluate the preliminary knowledge of the student.
 - Grading: 5 points.
 - Timeline: During the 1st practice session
- As soon as we check homeworks, we will discuss and outline results at practice sessions:
 - Correct/best answers.
 - Main mistakes.
 - The best practical (notebook) solution.

Tools

- Communication in Slack
- Lecture materials on GitHub
- Something could be happening in Moodle
- Homework can be submitted through:
 - GitHub;
 - Kaggle Notebook;
 - Google Colab.

Evaluation and Outcome

- The main outcomes are:
 - Make you interested in Deep Learning.
 - Give you a new knowledge.
 - Build a community.
- Evaluation:
 - Check all evaluation criteria in Syllabus
 - You can get additional points by:
 - Participating in Kaggle competitions. **BUT discuss your participation in any competition with lecturers in advance.**
 - Accepted Journal/Conference Papers. **Again discuss Journal/Conference and paper topic with lecturers in advance.**
 - Implementing existing papers (only if such an implementation does not exist). **Again discuss paper to implement with lecturers in advance.**
